Myers-Briggs Type Indicator® Global Step II™ Profile Copyright 2001, 2003, 2015, 2018 by Peter B. Myers and Katharine D. Myers. All rights reserved. Myers-Briggs Type Indicator, Myers-Briggs, MBTI, Step I, Step II, the MBTI logo, and The Myers-Briggs Company logo are trademarks or registered trademarks of The Myers & Briggs Foundation in the United States and other countries.

Your Myers-Briggs® Step II™ Profile gives you information about your personality type based on your answers to the MBTI® assessment. It first indicates your Step I™ results—your reported four-letter type. Next it shows your Step II results—your expression of five facets for each of the four Step I preference pairs.

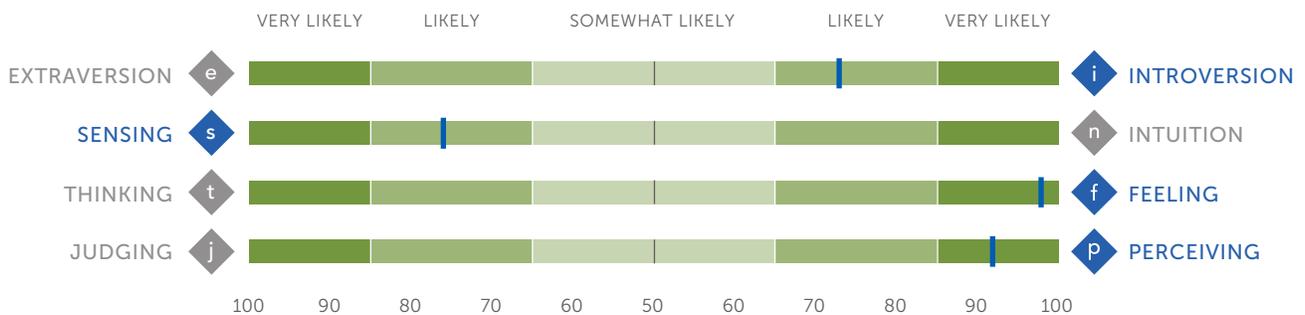

### Your Step I™ Results

ISFPs tend to be quietly friendly, sensitive, kind, and loyal. They would rather agree than disagree and avoid forcing their opinions or values on others. They are adaptable, flexible, and calm about getting things done. They enjoy the present moment and make things pleasant for others.

ISFP

Your preferences  
Introversion | Sensing | Feeling | Perceiving

#### PROBABILITY INDEX FOR EACH OF YOUR MBTI® PREFERENCES

PROBABILITY: INTROVERSION | 73    SENSING | 76    FEELING | 98    PERCEIVING | 92

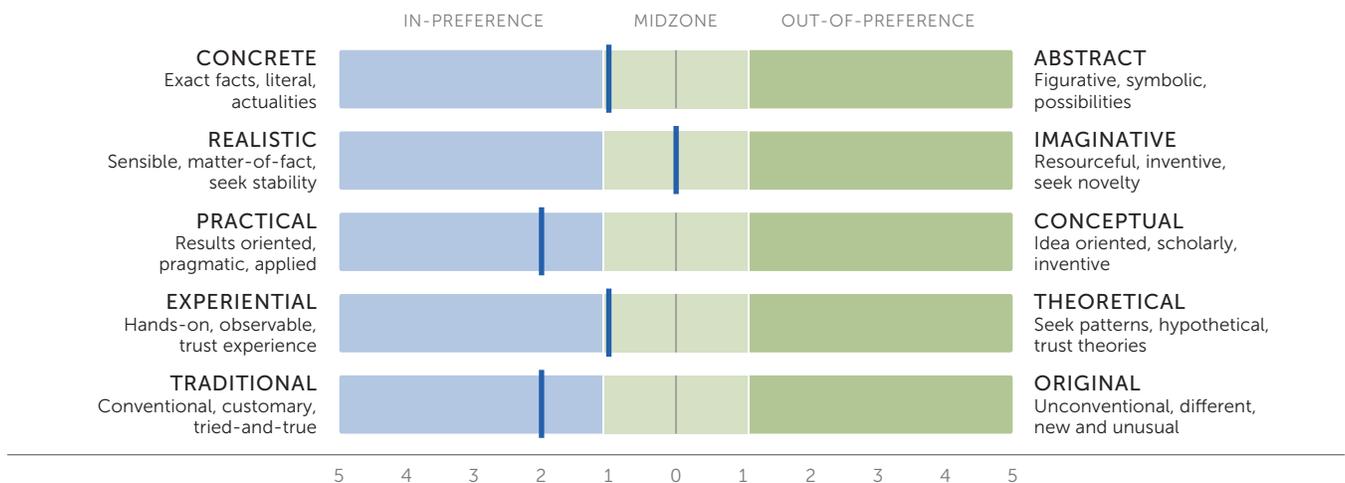

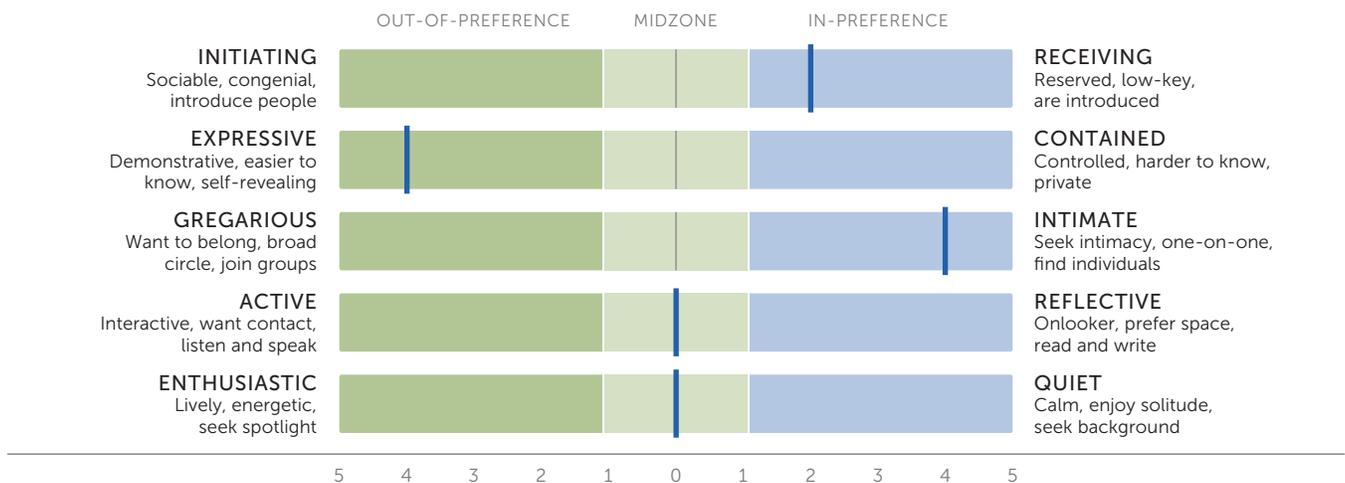

The graph shows how likely it is that your reported preferences really do fit you, indicated by the probability index shown for each of your preferences. The closer the blue marker is to a preference, the greater the probability that the preference describes you well. The probability index does not measure how much of a preference you have or how well you use that preference. It simply shows how likely it is that the preference you reported is accurate for you.

### Your Step II™ Results

The graphs that follow show your Step II results—your expression of five facets for each of the Step I preference pairs. Be aware that a preference is broader than its facets and so your five facet scores do not add up to your Step I preference score.

Each graph has five vertical markers, one per facet. A vertical marker on a blue background, indicating a score of 2–5, is an *in-preference* result, meaning you favor the facet pole on the same side as your Step I preference. A vertical marker on a dark green background, indicating a score of 2–5, is an *out-of-preference* result, meaning you favor the facet pole that is opposite to your Step I preference. A vertical marker on a light green background, indicating a score of 0 or 1, is a *midzone* result, meaning you show no clear preference for either facet pole.

# PROFILE

MYERS-BRIGGS TYPE INDICATOR® | GLOBAL STEP II™

MARIA SAMPLE

ISFP | 4

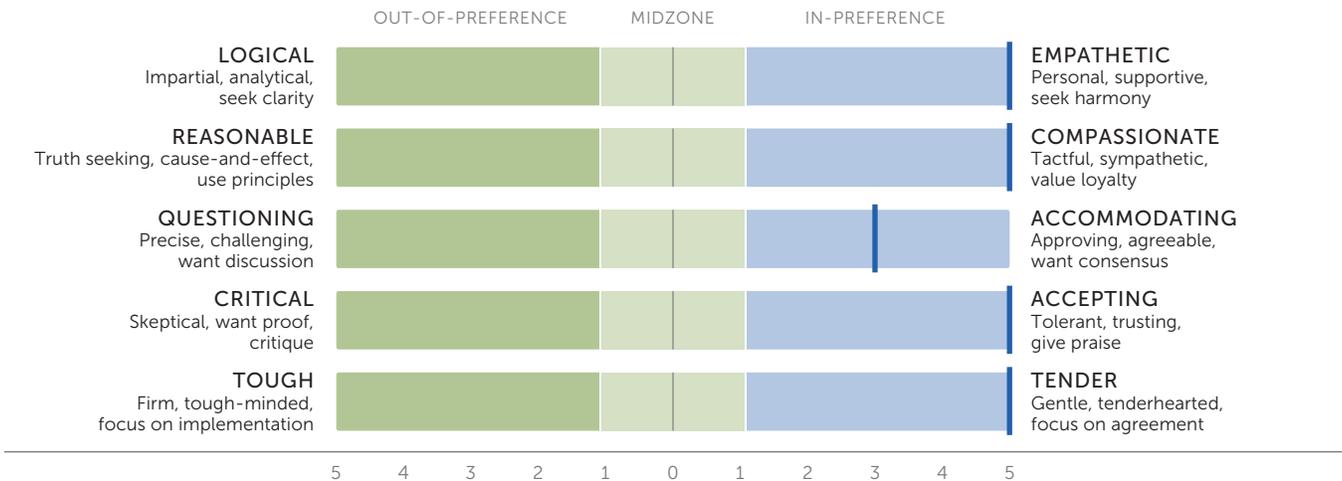

## THINKING

Basing conclusions on logical analysis with a focus on objectivity

## FEELING

Basing conclusions on personal or social values with a focus on harmony

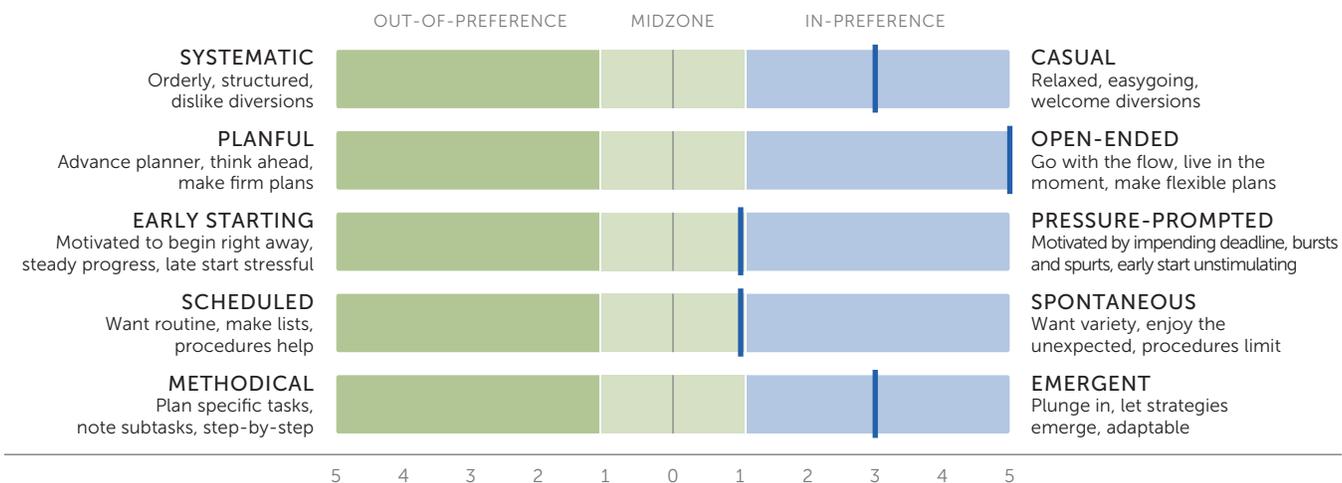

## JUDGING

Preferring decisiveness and closure

## PERCEIVING

Preferring flexibility and spontaneity

# Interpreter's Summary Based on Reported Type

REPORTED TYPE: ISFP

PROBABILITY FOR EACH REPORTED PREFERENCE

Introversion: Likely (73)

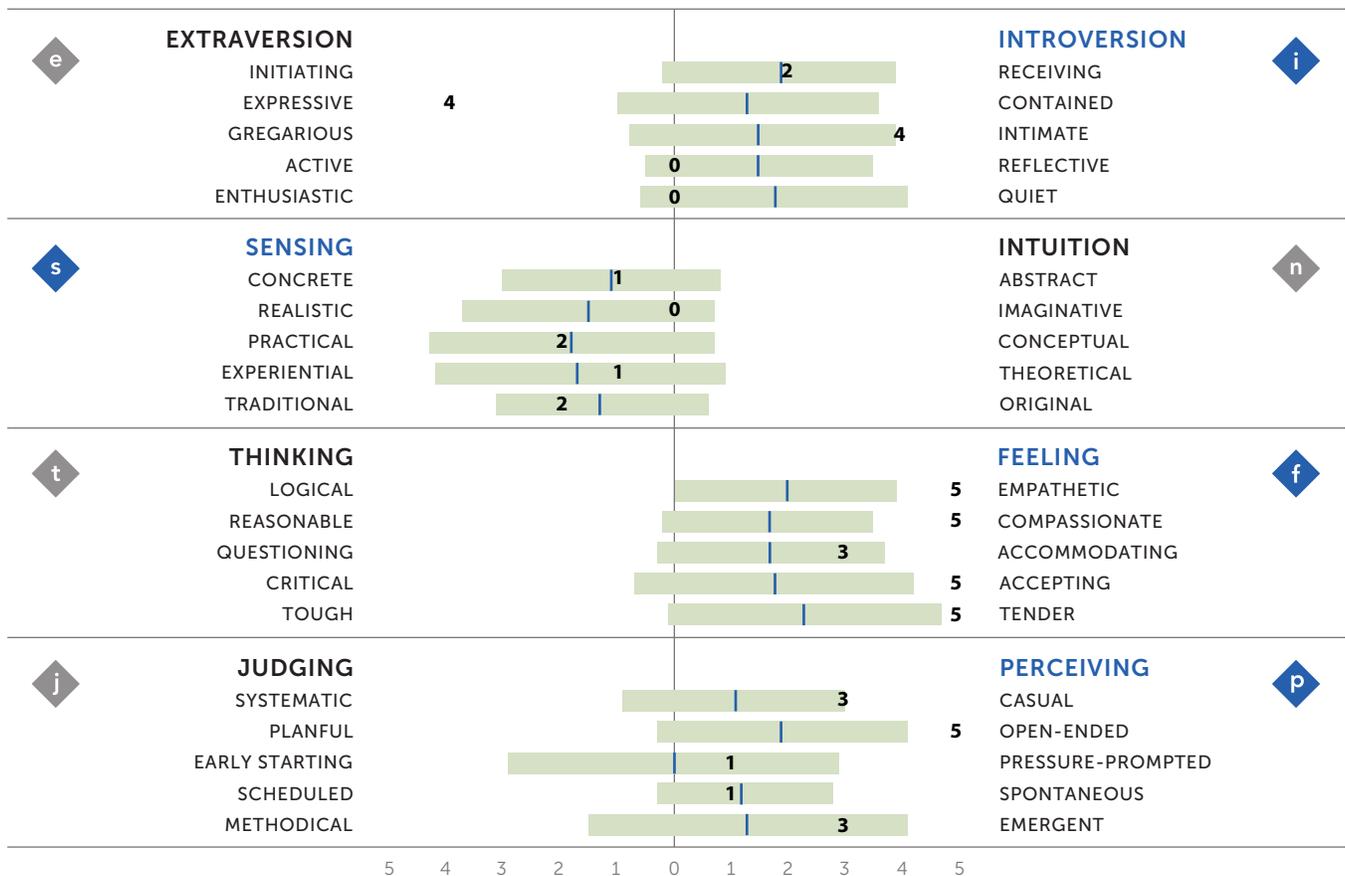

Sensing: Likely (76)

Feeling: Very Likely (98)

Perceiving: Very Likely (92)

## FACET SCORES AND THE AVERAGE RANGE OF SCORES FOR OTHER ISFPs

The bars on the graph below show the average range of scores that occurred for the ISFPs in the global sample. The bars show scores that are 1 standard deviation above and below the mean. The vertical line in each bar shows the mean score for ISFPs. The bold numbers show the respondent's scores.

### Polarity Index: 63

The polarity index, which ranges from 0 to 100, shows the consistency with which a respondent scores toward the poles of the 20 facets, regardless of which pole it is. Most adults score between 50 and 65, although higher indexes are common. An index below 45 means that the respondent has many scores in or near the midzone. This may be due to mature situational use, answering the questions randomly, or lack of self-knowledge. Some such profiles may be invalid.

### Number of Omitted Responses: 0
